Detailed Findings

■ **Mobile Experience Hazard:**

Your mobile speed score of 27 is in the CRITICAL range. Google penalizes sites specifically for this metric. Most patient/client searches happen on mobile devices, meaning you are likely losing traffic to faster local competitors.

■ **Desktop Performance:**

Your desktop score of 61 suggests unoptimized images or code bloat. While less critical than mobile, it affects professional credibility.

Recommended Action Plan

1. **Speed Optimization:** Compress images and defer unused JavaScript to boost mobile score above 50.
2. **Intelligent Intake:** Implement 24/7 AI lead capture to ensure no opportunities are missing during off-hours.
3. **Legal Compliance Update:** We will install the mandatory privacy policy pages to protect your business from new FDBR fines.

■ **VALUE OF FREE OFFER:** Typically, this optimization package (Speed Fix + Compliance Update) costs \$499. Waived completely for this initial audit to demonstrate value.
